Select an European manufacturer and retain the flexibility of deliveries. Participate in the development od products for your needs.

TIK d.o.o. company is the right choice, if you are looking for a reliable supplier of high quality and user-friendly products for human medicine.

As an European manufacturer of medical devices with more than 70 years of tradition, we have always been faithful to the quality at all levels of business. Based on years of experience and our own development, we offer products according to the modern needs of the market. On account of our flexibility we can fulfill your needs and desires. Our products are following all quality related standards to help people in facilitating a healthy life.

You can be carefree. Cooperation with TIK d.o.o. brings you new reliability, professional support and inspires confidence in end users.

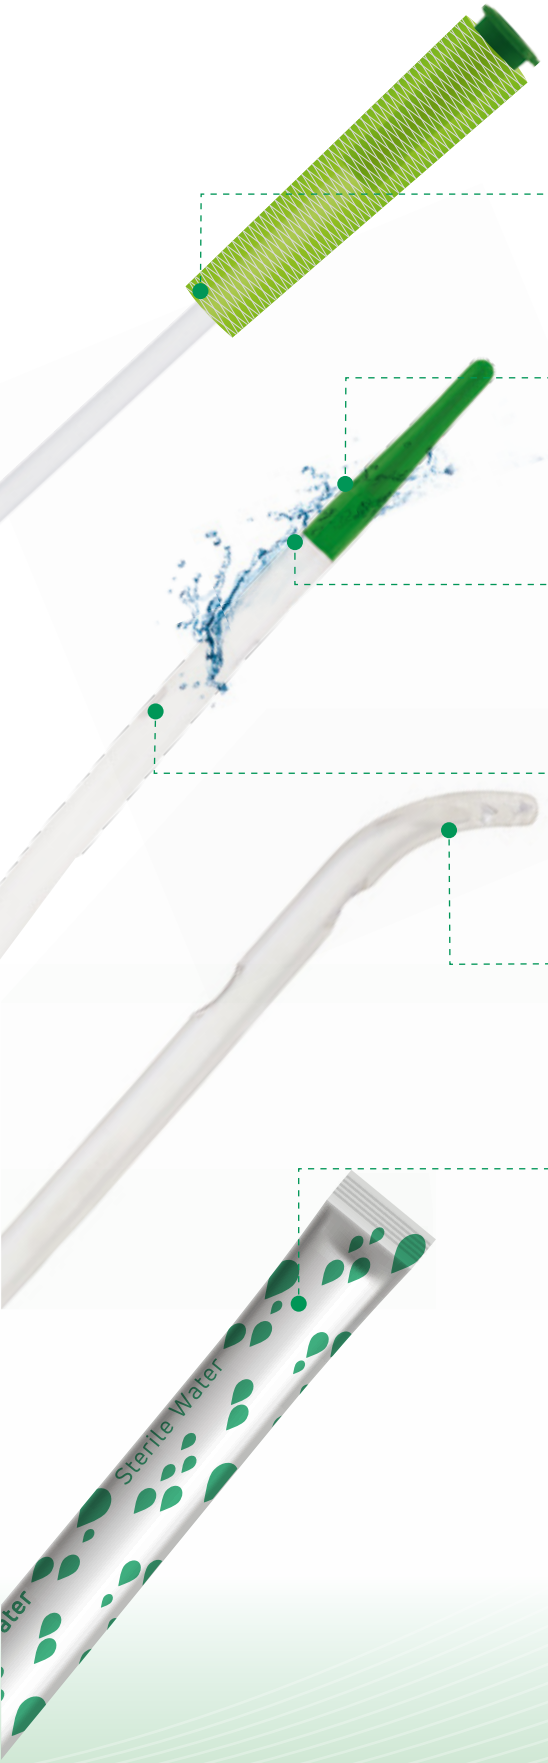
Urethral catheters

greencath®

Watch the video

greencath® catheters are innovative, user friendly catheters, developed with an advanced technological process and with a special formula of TIK's hydrophilic coating. This special hydrophilic coating, which is a product of continuous development, reduces the friction between the catheter and the urethral mucosal lining, thus reducing stress on the organism.



SLEEVE
Some dimensions have an additional sleeve allowing aseptic handling.

SOFT TIP
Soft, flexible tip enables easy catheter introduction in case of enlarged prostate and various urethral masses.

HYDROPHILIC COATING
Catheters feature a biocompatible coating that is activated by water in 30 seconds, a longer drying time after coating activation, and their excellent sliding capacity. Its compactness and good adhesion to the base catheter ensures that the coating does not detach after activation with water.

POLISHED SIDE EYES
Polished side eyes significantly reduce the possibility of urethral injuries and consequential urinary tract infections.

TIEMANN TIP
Tiemann tip enables easy catheter introdution in case of enlarged prostate and various urethral masses.

WATER SACHET
Water sachet attached, for easy activation of the coating, containing specially purified, sterile water.

PRIMARY PACKAGING
The opening system is simple and practical. The catheter in its primary packaging can be fitted in the upright position with two attachment systems - using a two-sided sticker on the back of the packaging, or by hanging using a hole on the blister.

greencath®

Coated Nelaton urethral catheter

- For daily catheterisation, for short-term use for introduction through the urethra for urine drainage or therapeutic purposes.
- Hydrophilic coating reduces the friction between the catheter and urethral mucosal lining.
- Minimal residue of the hydrophilic coating in the urethra reduces stress to the organism caused by absorption of the hydrophilic coating after the use of the catheter.
- Polished side eyes significantly reduce the possibility of urethral injuries and consequential urinary tract infections.
- Connectors are colour coded for easier dimension identification.

ASPIRATION CATHETER WITH VACUUM CONTROL - TIK PLUS

- For suction from nose, throat or lungs.
- Smaller side eyes enable better suction through distal eye.
- Catheter with distal eye and 2 side eyes.
- Centimeter marks.
- Connector are colour coded for easier dimension identification.

ASPIRATION CATHETER WITH CURVED TIP AND VACUUM CONTROL

- For endobronchial suction procedures.
- Curved tip allows easy access to the left bronchus.
- 4 side eyes.
- Centimeter marks.
- Connectors are colour coded for easier dimension identification.

GASTROENTEROLOGY

- Feeding tube with ENFit® connector
- Feeding tube
- Stomach tube
- Duodenal tube
- Rectal tube
- Catheter stopper

FEEDING TUBE WITH ENFit® CONNECTOR

- For enteral feeding in paediatrics.
- The tube only connects to syringes or systems that have a female ENFit® connector according to ISO 80369-3.
- 2 side eyes.
- Centimeter marks.
- Soft, rounded tip of the tube enables atraumatic insertion.
- Matted surface of the tube allows minimal use of lubricants.
- Connecting elements are colour-coded for quick and easy identification of CH.

FEEDING TUBE

- For enteral feeding in paediatrics.
- Matted surface eliminates need for lubricant.
- Connector fits to luer syringes or administration lines (pumps).
- Centimeter marks.
- 2 side eyes.
- Feeding tube length 350 and 500 mm with 1 cm depth markings.
- Feeding tube length 1000 mm with 25 cm depth markings.
- Colour-coded connectors for easy identification of dimension.

STOMACH TUBE

- For feeding or emptying of stomach contents or gastric lavage.
- Colour-coded connectors for easy identification of dimension.
- Tube with closed rounded tip.
- 2 side eyes.
- Centimeter marks.
- Stomach tube length 800 mm with 10 cm depth markings: 45, 55 and 65 cm from the distal end.
- Stomach tube length 1200 mm with 10 cm depth markings: 45, 55, 65 and 75 cm from the distal end.

DUODENAL TUBE

- For aspiration of intestinal fluid in therapeutic or diagnostic purposes.
- Tube with closed tip.
- 4 side eyes.
- Colour-coded connectors for easy identification of dimension.
- Duodenal tube with 10 cm depth markings: 45, 55, 65 and 75 cm from the distal end.

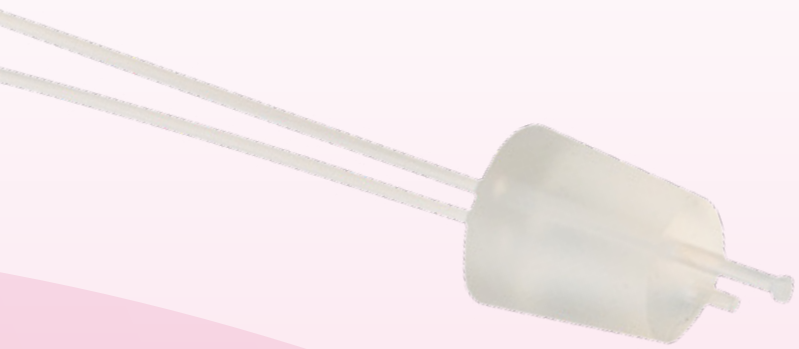
CATHETER STOPPER

- For closing of the connectors on catheters or tubes.

REF		
2590	40	4000



GYNAECOLOGY

- Follicle aspiration needle

FOLLICLE ASPIRATION NEEDLE

- Follicle aspiration needle is used for ultrasonic guided, transvaginal harvesting of oocytes from follicles.
- Ergonomically designed needle holder.
- Atraumatic echo marker.
- Smooth inner surface of cannula and connecting tubes.
- Female Luer lock connector enables connecting to an aspirator or syringe.
- Transparent, kink resistant connecting tubes.
- Two bevel types available.
- Conical shaped tubing endings enable safe outflow into the tube.
